备注 Comment	pSpCas9n(BB)-2A-Puro (PX462) V2.0 is a mammalian CRISPR/Cas9 plasmid that expresses a humanized Streptococcus pyogenes Cas9 D10A nickase fused via a 2A peptide to puromycin resistance. The nickase cuts only one DNA strand; paired with two offset sgRNAs it creates a precise double-strand break, greatly reducing off-target effects in gene knockout and genome editing.

复溶方法

1. Centrifuge at 5,000×g for 5 min.
2. Carefully open the tube and add sterile water to dissolve the DNA: add 20 µl for 5 µg plasmid, and 100 µl for 100 µg plasmid.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin to concentrate the liquid at the bottom. Speed is less than 5000×g.
5. Store the plasmid at -20 ℃.
