| **备注 Comment** | This is a 6946 bp yeast expression vector, p426-SNR52-sgRNA-TEF-Hygro. It is designed for expressing sgRNA under the control of the SNR52 promoter, with the TEF promoter driving the Hygromycin resistance gene. The vector includes a 2u origin for high-copy replication in yeast, an AmpR/ori cassette for bacterial propagation, and f1 ori for single-stranded DNA production. |

## 复溶方法

1. Centrifuge at 5,000×g for 5 min.
2. Carefully open the tube and add sterile water to dissolve the DNA: add 20 µl for 5 µg plasmid, and 100 µl for 100 µg plasmid.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin to concentrate the liquid at the bottom. Speed is less than 5000×g.
5. Store the plasmid at -20 ℃.
