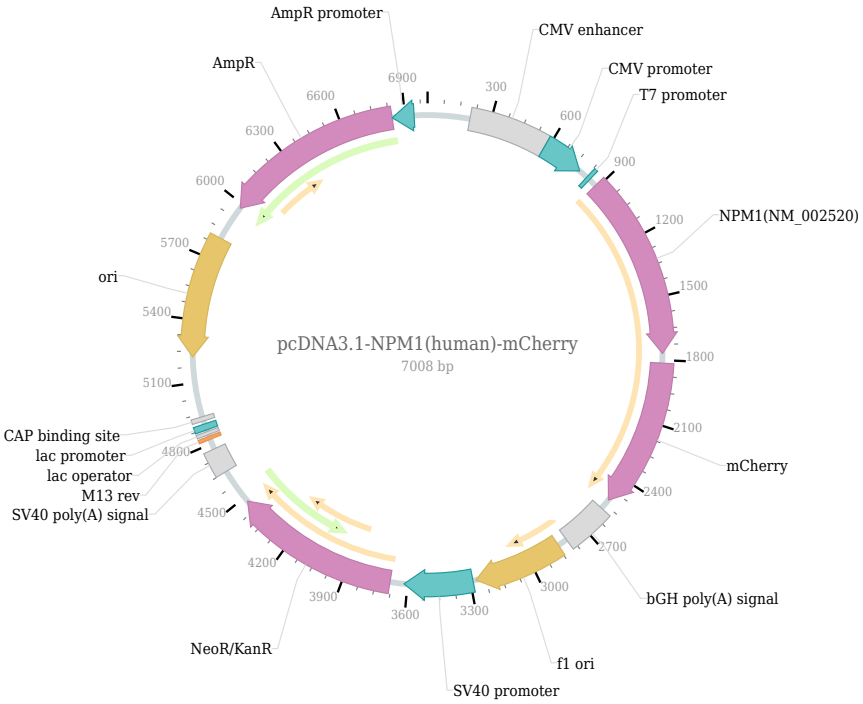
pcDNA3.1-NPM1(human)-mCherry

载体编号 Vector ID	V045944
登录号 Accession ID	NM_002520.7
抗性 Antibiotic Resistance	Ampicillin
长度 Length	7008 bp
载体类型 Vector Type	Protein expression
宿主 Host	Mammalian cells

产品信息

复制子 Replication Origin	ori
筛选标记 Selection Marker	Neo/G418;mCherry
拷贝数 Copy Number	High
启动子 Promoter	CMV
5' 引物 5' Primer	CMV-F
融合标签 Fusion Tag	mCherry
培养菌株 Growth Strain(s)	DH5a
培养温度 Growth Temperature	37℃
表达方式 Expression Method	Transient
备注 Comment	pcDNA3.1-NPM1(human)-mCherry is a mammalian expression vector for fluorescently tagging human NPM1 (nucleophosmin, also known as B23). A CMV promoter drives expression of the full-length NPM1 coding sequence (NM_002520) fused with a C-terminal mCherry (red fluorescent protein) for direct visualization of nucleophosmin localization in live cells. The vector also includes NeoR/KanR (G418 resistance) for stable selection, AmpR for bacterial selection, pUC ori, f1 ori, SV40 promoter/poly(A), bGH poly(A), and M13 priming sites.

质粒图谱



复溶方法

1. Centrifuge at 5,000×g for 5 min.
2. Carefully open the tube and add sterile water to dissolve the DNA: add 20 µl for 5 µg plasmid, and 100 µl for 100 µg plasmid.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin to concentrate the liquid at the bottom. Speed is less than 5000×g.
5. Store the plasmid at -20 ℃.
