备注 Comment	pLVX-CMV-IRES-EGFP-Puro is a Lenti-X self-inactivating lentiviral vector in which the CMV promoter drives the gene of interest upstream of an EMCV IRES-linked EGFP for bicistronic co-expression. Puromycin resistance supports stable line generation; AmpR, Stbl3 propagation with Lenti-X or third-generation packaging mixtures in HEK293T cells.

复溶方法

1. Centrifuge at 5,000×g for 5 min.
2. Carefully open the tube and add sterile water to dissolve the DNA: add 20 µl for 5 µg plasmid, and 100 µl for 100 µg plasmid.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin to concentrate the liquid at the bottom. Speed is less than 5000×g.
5. Store the plasmid at -20 ℃.
